Double Spiral Mixer

The Topos removable bowl double spiral dough mixers (RBDSM) are heavy duty and built for demanding production requirements. The reinforced, double spiral mixing agitators with dual “stripper” bars offer a faster and more thorough dough mixing in less time than a single spiral agitator mixer. The entire dough mixing zone is constructed in heavy duty stainless steel. The mixer bowl bonnet allows for the connection to both dry and liquid bulk ingredient feeds. The mixer is built up on six leveling legs to allow for the cleaning of the floor under it.

The mixer is fabricated to be “cleaning friendly,” allowing easy access for sanitation. The agitators are driven via a heavy duty, high efficiency, two-speed drive motor connected to Kevlar reinforced timing belts and oversized bearing support assemblies. This double spiral agitator design can handle both soft and firm dough mixing tasks with extremely high efficiency. The Allen Bradley Panel view and PLC allows the operator to run preprogrammed mixing recipes for full control and consistency.

Standard Features

Includes a heavy duty, swing out, hydraulic package with hand pump feature for use when mixer is not under electrical power.

Heavy duty "Gates Carbon GT" timing belt drives with oversized bearings are standard.

The bowl lid is fabricated from stainless steel and can include bulk dry and bulk liquid ingredient inlets as well as a manual infeed grill on top. The OSHA safety edge ring is standard.

The Allen Bradley PLC and electrical components in the electrical panel comply with all current electrical and safety codes.

The mixer includes the bowl side scraper and an optional dough temperature sensor.

All stainless steel product zone with reinforced double spiral agitators and a stainless steel bonnet includes rugged hydraulic bowl locking clamp assembly and positive mixing bowl gear drive.

Six stainless steel leveling feet to raise mixer for ease of cleaning
