Spiral Conveyor Systems

Topos can design, fabricate and install custom made spiral conveyor systems for cooling, proofing and/or freezing applications, all made from 100% stainless steel.

The systems are designed, engineered and fabricated specifically to meet your exact needs for the product, dwell time, application, and the space available. Topos can also provide the interconnecting product conveyors that would feed both into and out of the spiral system. The control systems can be simple relay logic type or fully programmable PLC's with operator touchscreen panels as desired. There is a myriad of spiral configurations to choose from as well as various belt widths and belt types to best suit your layout and your product. Direct drive cage designs are also available as well as traditional chain driven designs.

Standard Features

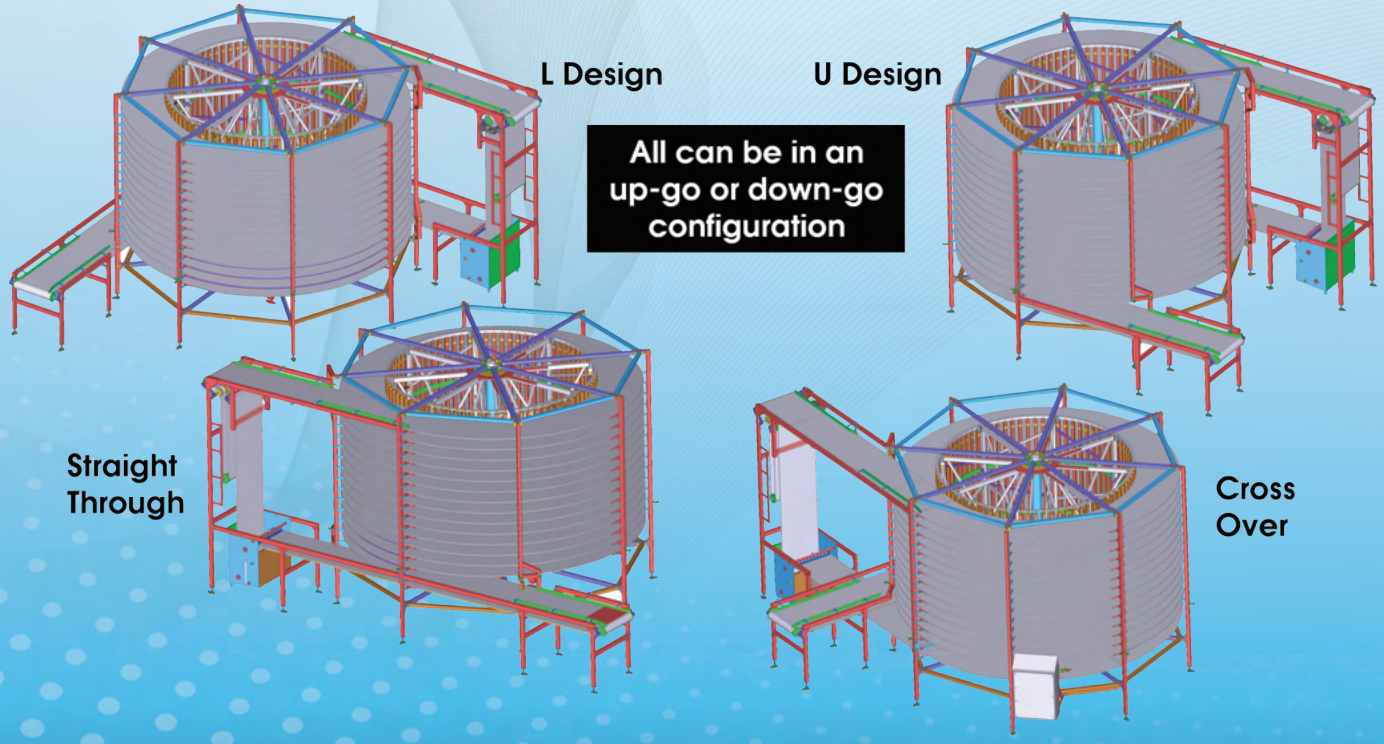

- All high quality stainless steel construction is standard.
- Sanitary, wash down design and construction.
- Direct gearbox drive cage system.
- All NEMA 4 electrical enclosures and execution.
- PLC and HMI touchscreen on the master electrical panel, voltage and cycles to suit. Synchronized VFD's on both the main and the tension motors.
- Product belting can be of various widths and types and in either all stainless steel, combination stainless steel-plastic or in all modular plastic.
- The overall footprint, product clearances and dwell time on the spiral are designed and built to suit.
- Ambient, refrigerated, freezing and proofing applications are all possible.

Optional Features

- Inline belt washers.
- Additional personnel safety fencing around the perimeter base of the spiral.
