Sugaring /Coating Machine

Topos has taken automatic sugaring to the next level. Our machines are designed to give your product a uniform, adherent coating of powdered sugars, cinnamon, and similar types of coatings. It is an adjustable, high-capacity machine which will produce a consistent coating on your product. These coating tumblers employ a separate, detachable, spiral auger type coating bin and feed screw system. Being easy to clean, maintain and to operate means that our machines pay for themselves over time.

Our Sugaring Machines allow for smooth operations 3 shifts a day, every day of the year. Maintenance requirements are minimal; sanitation is easy. Both the model T-1000 and the model T-2000 are available with left or right-side sugaring bins with an approximate 250 pound storage bin capacity. The configuration to be selected will depend on its convenience for loading the sugar bin while in production based on your layout.

Standard Features

All stainless steel construction with hinged (and electrically interlocked) access doors for quick, easy cleaning without the use of tools.

The coating "re-circulation" design makes it easier to operate.

Oversized infeed sugar bin for sanitary use. Includes a safety grate over the auger feed bin with a bin vibrator for positive feeding of the coating into the auger, and a variable speed auger feed controller for precise coating control

Full stainless steel "open frame" for simplified cleaning and sanitation.

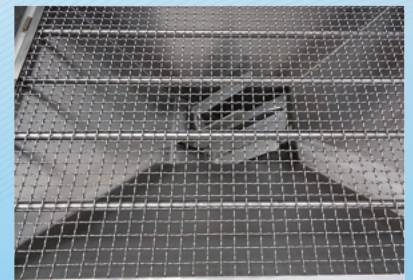

The sugar tumbler is interlocked such that it must be running before the sugar feed system can be started to prevent the packing of sugar in the tumbling drum.

Drum fingers to reduce sugar build up on the outer surface of the inner coating drum.

Adjustable drum angle for product flow control. Can be adjusted by hand while running.

Fully agitated sugar bin with positive spiral screw auger feed.
