Topos Fully Adjustable Hand Bagger

Simply load up to 1,000 wicketed bags into the bag magazine to begin the process. An advanced high-pressure motorized blower air system generates air continuously and directs a meticulously regulated air stream into the bag. This controlled air stream holds the bag open with the assistance of precision guide arms which swing into the bag to hold it open. As the product advances towards the bag's opening, the guide arms retract inward to the bag, transforming the initially flimsy bag material into a sturdy container suitable for loading. This innovative technique enables fast and effortless filling, even with unskilled assistance.

Standard Features

***No compressed air is needed.**

Bag Width: 4" to 13" wide, lengths to suit, wicketed poly bags only.

Can have adjustable height bag funnels to accommodate a range of products.

Table top design with adjustable bag opening guides & funnels to suit the product.
