Sugaring /Coating Machine

Topos has taken Automatic Sugaring to the next level. Our machines are designed to give your product a uniform, adherent coating of powered sugars, cinnamon, and similar types of coatings. It is an adjustable, high capacity machine which will produce a consistent coating on your product. Being easy to clean, maintain and to operate means that our machines pay for themselves.

Our Sugaring Machines allow for smooth operations 3 shifts a day everyday of the year. Maintenance requirements are minimal; sanitation is easy. Both the T-1000 and the T-2000 are available with left or right side sugaring bins with an approximate 200 pound storage bin capacity. The configuration to be selected will depend on its convenience for loading the sugar bin while in production.

Standard Features

Push button station can be customized to suit.

All stainless steel construction with hinged (and electrically interlocked) access doors for quick, easy cleaning without the use of tools.

Positive cup feeding on sanitary chain for easy wash down in the sugar elevator.

Drum fingers to reduce sugar build up on the outer surface of the inner coating drum.

Adjustable drum angle for product flow control. Can be adjusted by hand while running.

Fully agitated sugar bin with positive auger feed.

The sugar "tumbler" must be running before the sugar feed system can be started to prevent the packing of sugar in the tumbling drum.

Oversized infeed sugar bin for sanitary use. Includes support shelf to hold the bag of sugar during filling of bins.

Full stainless steel frame for ease of cleaning and sanitation.
