Digital Doughnut Depositor

Experience the world's first digitally operated, advanced cake doughnut depositor. The Digital Depositor by Topos boasts remarkable efficiency with significantly fewer moving parts—only two main moving components—compared to its competitors. This advanced design ensures that the machine is easier to use, clean, service, and rebuild. The precision digital control offers unparalleled cutting action, accurate weight adjustments, and quick compensation for varying batter viscosity at the touch of a button.

The Topos Digital Depositor can seamlessly integrate with existing mobile carriers and utilizes customers' current cutters and plungers. Operator-friendly features include automatic plunger-cutter oil lubrication, straightforward insertion and removal of plungers and cutters, and easy plunger top bushing management. The elimination of cutter clamps minimizes costly operator errors. Additionally, the machine accommodates various multi-spaced plunger arrangements with its numerous cutter-holding plates and offers programmable recipe settings for all batter varieties.
